3.2.P.8.1 Stability summary and conclusion

Three primary batches of Examplamox 500 mg/125 mg film-coated tablets were placed on stability in the proposed commercial pack (Alu/Alu blister).

All results stayed within specification. Based on these data, a shelf life of 36 months is proposed when the product is stored below 25 °C in the original package.

3.2.P.8.3 Stability data

Table 1. Storage conditions and duration of data

Study	Condition	Data available
Long-term	25 °C / 60% RH	12 months
Accelerated	40 °C / 75% RH	6 months

Assay, related substances and dissolution met the acceptance criteria at every time point.

3.2.P.8.2 Post-approval stability protocol

The applicant commits to continue the long-term study on the three primary batches up to the end of the proposed shelf life, and to place one production batch per year on stability.
